

PH.D. ENERGY & ENVIRONMENTAL POLICY

The Biden School of Public Policy & Administration at the University of Delaware's Energy & Environmental Policy graduate programs are the first of their kind in the United States. These programs have earned international recognition for being among the top three programs in this field.

Energy & Environmental Policy faculty and students work critically and analytically on issues of climate change, energy transformation, renewable and nonrenewable energy options, environmental justice, smart cities, and sustainable development.

CAREERS IN ENERGY & ENVIRONMENTAL POLICY

Alumni of the program are prepared for rewarding academic or professional careers in sustainable energy and water development, environmental protection, climate change policy, and green economics. Careers include energy and environmental planning, policy analysis, management and administration, and research in the public, private and nonprofit sectors. Our alumni go on to positions in universities, governments, international agencies, research and policy institutions, consulting firms, energy utilities, and private businesses.

ADMISSION & SUPPORT

Admission to Biden School doctoral programs is competitive, and we limit the number of students admitted to ensure that each student has access to the full resources and benefits available.

We are committed to four years of funding for all admitted full-time Ph.D. students. This support includes a stipend for a research or teaching assistantship assignment and 100% graduate tuition scholarship.
