

CCSI Inc.

Job locations Moorestown NJ
Somerset NJ Secaucus NJ
Elizabeth NJ

Perform assignments on work related to recording or producing information associated with the construction, operation, and maintenance of Utility Systems as qualified through formalized and/or on the job training. Maintain the GIS connected model with information from sources including, but not limited to, work management systems, as-built construction drawings, work orders, completion records, field reports or other information from the job sponsor. Process and approve completion records. Perform analysis or queries to assemble data and prepare reports, tabulations, charts and maps from asset information contained in the connected model and various other data sources. Produce standard prints and ad-hoc plots for field requests containing specific information derived from the connected model and various other data sources. Maintain service point data and the relationship to feeding source transformer. Track lifespan of utility asset data, including history, inspection and attachments. Resolve conflicting data, mapping, connectivity, and land issues through office or field investigation.

Perform GIS work pertaining to major projects such as facility relocations, load rearrangement and new business.

Thanks, Rob Robert Ryder
