

Participate in Movement Evaluation and Training Studies at the University of Delaware

The Department of Physical Therapy of the University of Delaware is conducting a number of studies related to the recovery of function following a stroke. These studies address 1) functional arm movement and 2) walking ability. Several studies involve the application of novel treatment interventions. All studies will help us to develop improved evaluation and treatment procedures for individuals who have suffered a stroke. **There is no charge for participation in any of these studies.** Free transportation can be arranged for you if necessary. You may also be eligible to receive a stipend for your participation, depending on the study.

If you are interested in participating in one or more studies, please contact the scheduling secretary at **302-831-8521** to obtain more information. Alternatively, please fill in your contact information below, tear off the card at the perforation (the back portion contains our address and free postage), and drop it in the mail. Someone will then contact you about the various studies. Your consideration is greatly appreciated!
