

DEFLATING GRADY
Part I – Maintaining Standards

The following is an e-mail exchange between Prof. Grady Rizeng and his department chair, Lewis Marks, that Prof. Rizeng has forwarded to Dean Nolira.

Dean Nolira,
Can you believe what I have to put up with? I'm begging you to do something about the way I'm treated by this tyrant!

Grady Rizeng
University Distinguished Professor

I'm not saying that. What concerns me is that your grades reflect a different standard and that has all sorts of implications. Let's meet tomorrow morning at 8 to discuss grade inflation. That's not too early for you I hope.

Lewis Marks
Department Chair

But as you said yourself, we get really good students. Do you really think half of them should get C's or lower?

Grady Rizeng
University Distinguished Professor

Subject: RE: RE: Maintaining our standards

That's fine, but perhaps you need to redefine the criteria for excellence. Do you think this is Lake Wobegon where all the students are above average? From your grades, I can't tell who the best students are.

Lewis Marks
Department Chair

Subject: RE: Maintaining our standards

Absolutely. With all due respect, I don't accept the premise that low grades necessarily mean high standards. They could mean unreasonable standards or poor teaching. I have taught my courses for many years and have well-defined criteria for an A. If everyone achieves those criteria, then everyone gets an A. Of course the converse is true as well.

Subject: Maintaining our standards

As you should be aware, this department is well known for its rigor. We attract excellent students and they work hard. For many years the average grades given in this department have been among the lowest on campus, which reflects our demanding standards.

My reason for writing you is that grades in this department have risen in recent years and the grades you give are among the highest in the department—63% A's and B's. Do you really think your students deserved those grades?

Lewis Marks
Department Chair

-
1. Individually: In 25 words or less, write down in a complete sentence your definition of *grade inflation*.
 2. To be announced.

DEFLATING GRADY

Part II – Midnight Thoughts

Somehow Grady Rizeng couldn't get to sleep. He had just ripped off the e-mail to the dean to vent his frustration. He kept thinking about his 8 AM meeting with Dr. Marks. He felt blind-sided by the insinuation that the grades he gave his students were too high. He had never looked at his grades over time or in comparison with grades given by his faculty colleagues. Never had he thought he was being easy on the students and their course evaluations suggested they had worked hard in his courses. *“What evidence does he have that the increase in grades in the department is due to my courses or a decrease in my standards? Couldn't it simply be that our students are getting better? There are all sorts of reason that grades might be rising.”* At 1 AM he got out of bed and logged on to the Internet to see what he could find out that would help him later in the morning.

Meanwhile, Lewis Marks was having second thoughts. *“Did I come down too hard? I assumed Grady's high teaching ratings reflected easy grading standards. Did I jump to an incorrect conclusion? I need to check into this a bit more.”* And he logged on to the Internet as well.

1. What information should Prof. Rizeng bring to the meeting with his chair?
2. What evidence would Chairman Marks need to demonstrate grade inflation?

DEFLATING GRADY

Part III – What’s the Evidence?

Within a few minutes of googling “grade inflation” both Prof. Rizeng and Chair Marks found the following graph. The data show the average grades received by college students at US public and private schools over the past 30 years.

This graph comes from www.gradeinflation.com.

1. What conclusions can you make by examining these data?
2. Does this constitute grade inflation as presented in your group’s definition?
3. Make a list of questions (learning issues) you have about these data.

DEFLATING GRADY

Part III – What’s the Evidence (to be distributed at the workshop)

Part IV – Who Cares?

As an individual, match the statements below with the following stakeholders. Then compare with other in your group and come to consensus.

- Chairman Marks
- Dean Nolira
- Student Council Member
- Faculty Governance Representative
- Parent of a Student
- Alumnus who hires Graduates

- A: “This is a complex problem. We need to create a culture where learning not grades is the focus.”
- B: “This is an academic freedom issue. They can’t tell Grady what to do.”
- C: “In addition to grades, the transcript should include a score from a nationally standardized exam in the discipline.”
- D: “Why is Prof. Rizeng being harassed by his department when he’s a great teacher.”
- E: “What are Joe’s chances of getting into medical school if they limit the number of ‘A’s’?”
- F: “Without uniform and demanding standards, grades aren’t worth a thing.”

DEFLATING GRADY
Parts V and VI – Formulating a Plan

Princeton University's faculty recently approved a proposal to limit the number of "A's" in any department to 35%. Your diverse group of stakeholders has been charged to do better and come up with an effective solution. Your plan needs to eliminate or reduce the problem of grade inflation and be feasible in terms of time, person-power, expense, and material.

Your satisfactory plan will be presented to the other workshop participants..
