

# Smyrna School District

## Technology Commitment 2000-2001

### *THE Technology Goal*

Technology will be used throughout the district to help every student meet or exceed the standards. These uses include instructional (both teacher-directed and student utilization), administrative (teacher-level to district-level), and support services applications of technology.

|-------------------|---|
| <b>GOAL</b>       | To make progress, you must set some achievable goals. Below are some areas you may choose to focus on. State your particular goal for the 2000-2001 school year. <ul style="list-style-type: none"><li>• Gaining skills in a particular technical area or software.</li><li>• Focusing on integrating web resources for information throughout one or more of your curricular areas.</li><li>• Using the web for communication with students and parents.</li></ul> |
|                   |   |
| <b>PLAN</b>       | How will you reach this goal? Include plans for self-directed learning, attendance at workshops, trials with your students and any other ways you have to reach your goal.  |
|                   |   |
| <b>ASSESSMENT</b> | How will you and your supervisor know you have made progress toward your goal? List several things that can be observed to show that you have moved from where you were in June 2000 to the goal you committed to above. This does not mean how many seminars you attended but real changes that can be observed in you or your students.   |
