# What is a native plant?

native plant is one that originated and occurs naturally in a region. Nonnative plants also may occur naturally, but were introduced from another region. They survive without intervention and compete successfully with native plants. Native and nonnative plants often occur side by side in natural stands. Only historical records can trace true origin.

# Why landscape with native plants?

ince native plants are indigenous in an area, they are ideally suited to grow in a similar habitat within the region. Having competed with other plants, native plants have proven themselves well adapted. Plants used in a landscape environment that is similar to their native habitat will grow with a minimum of maintenance. When appropriately placed in the landscape, native plants require less water and fewer pesticide applications. If native plants require pampering, the most likely reason is an unsuitable location.

Planting native species protects them from extinction. As land is developed, some native plants are pushed out of their natural habitats. The sensitive use of these plants in the landscape preserves them for all to appreciate.

The University of Delaware Botanic Gardens (UDBG) is located on the the University of Delaware campus in Newark, Delaware, 1.5 miles north of Interstate 95. The UDBG occupies approximately 10 acres that surround the agriculture buildings and is situated on the division

agriculture buildings and is situated on the division of USDA hardiness zones 6b and 7a. The gardens are open year-round and visitors are welcome. For more information, call (302) 831-2531.

The UDBG contains a broad array of plant material. Emphasis is placed on plants that have merit for landscape use. This includes plants currently available, new cultivars and plants that potentially could be used in the landscape. The garden emphasizes the following groups of plants: plants in the Hamamel idaceae, Acer, magnolia, Styrax, Viburnum and Ilex. The UDBG is an official arboretum of the American Holly Society of America.

## Mission Statement

The mission of the UDBG is to promote general interest in plants and demonstrate environmentally sound ways of using them aesthetically in the landscape.
