

Revolutions in Urban Water

Beyond The Water Cycle

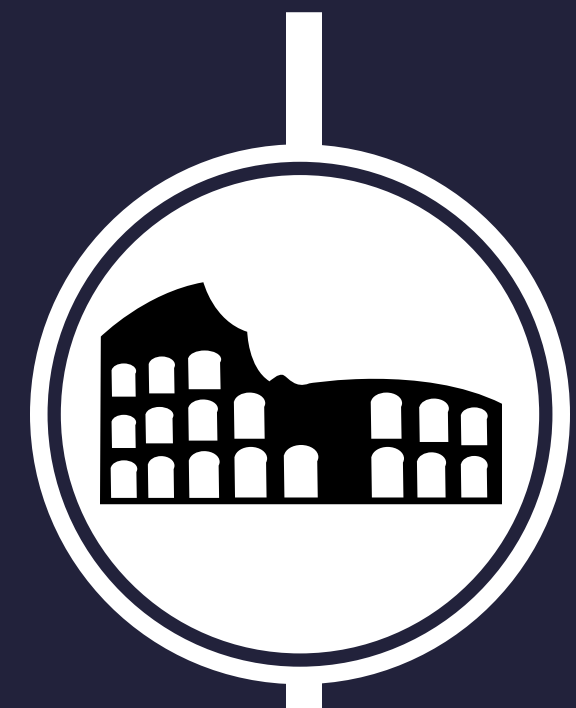

Water Through History

Getting to the "right" water

Aqueducts

Created complete water importation systems; Roman aqueducts.

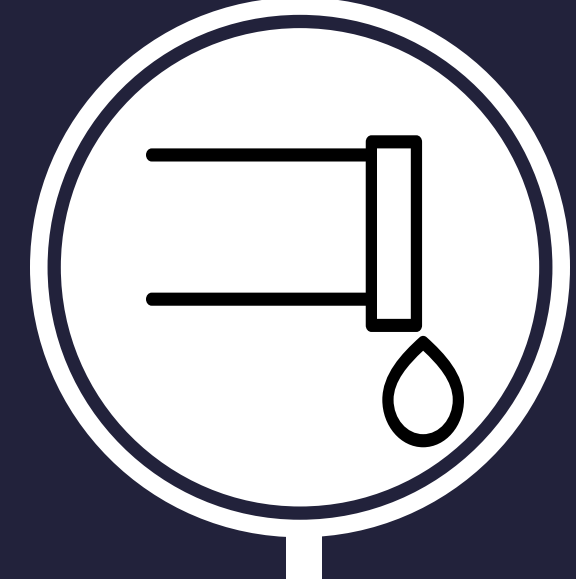

Filtration

The development of drinking water filtration systems and disinfecting systems for human use.

Wastewater

Sewage treatment plants were developed which in turn helped reduce the spread of waterborne diseases.

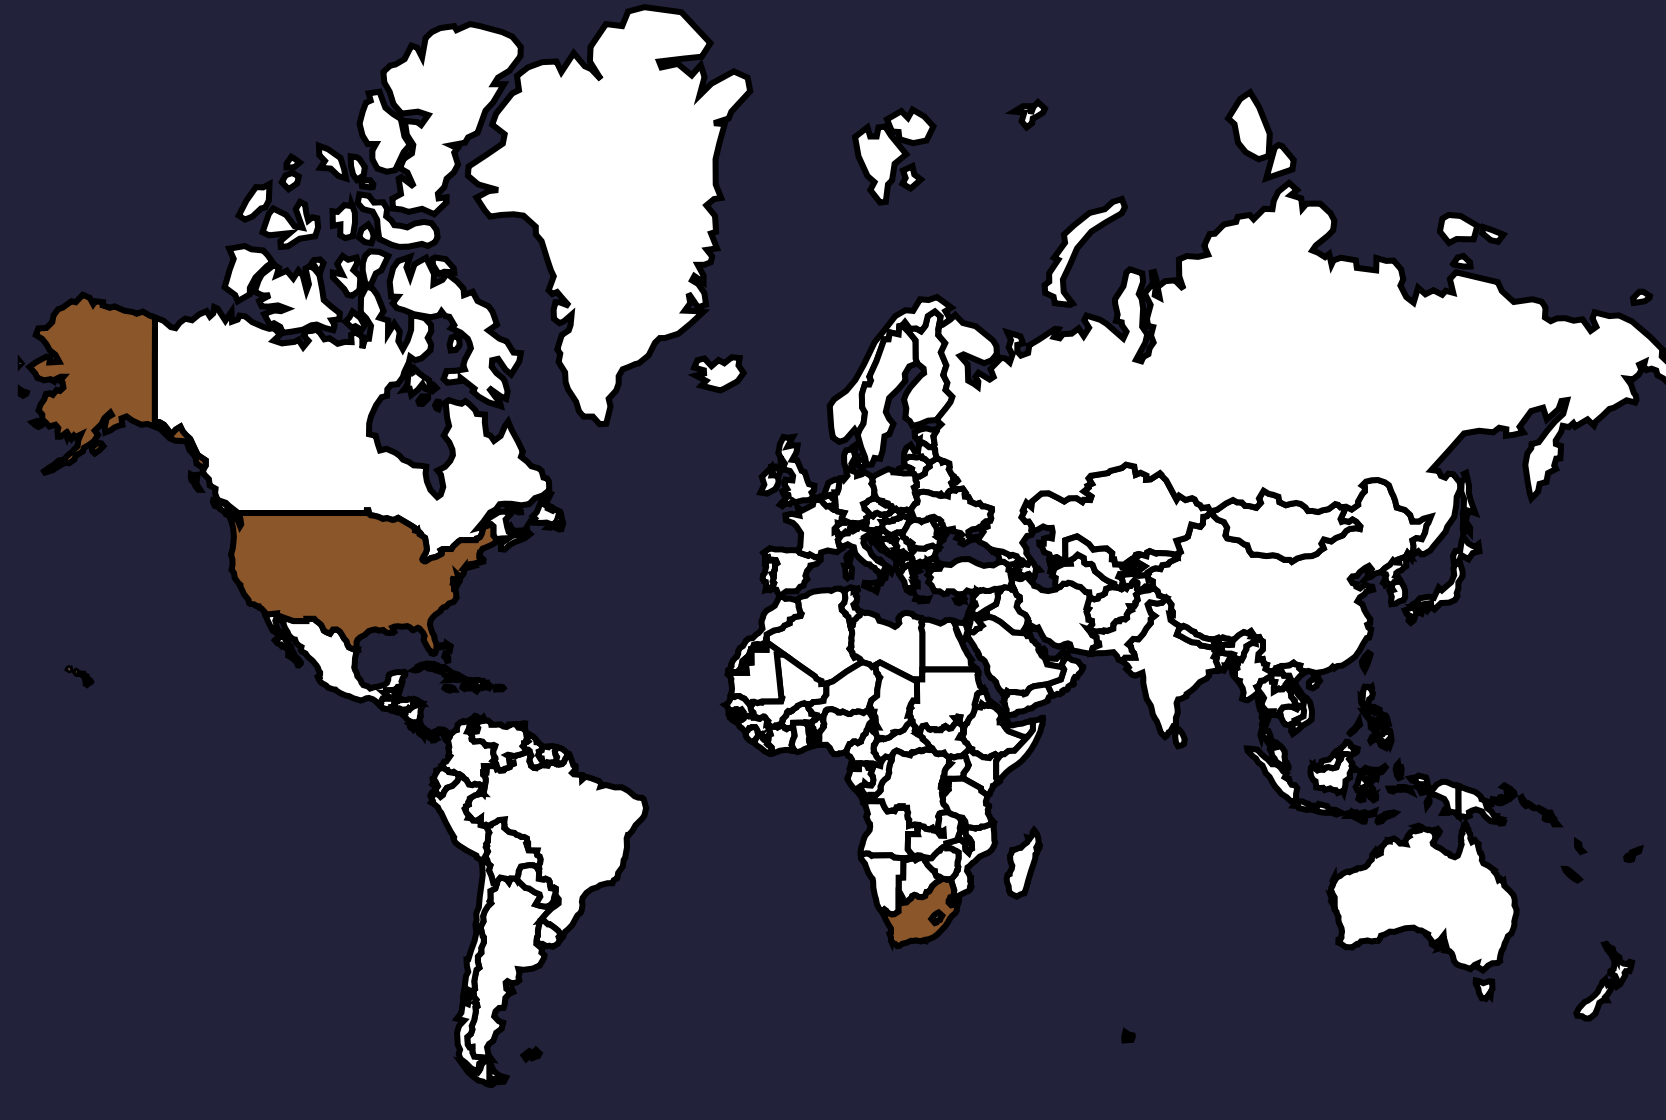

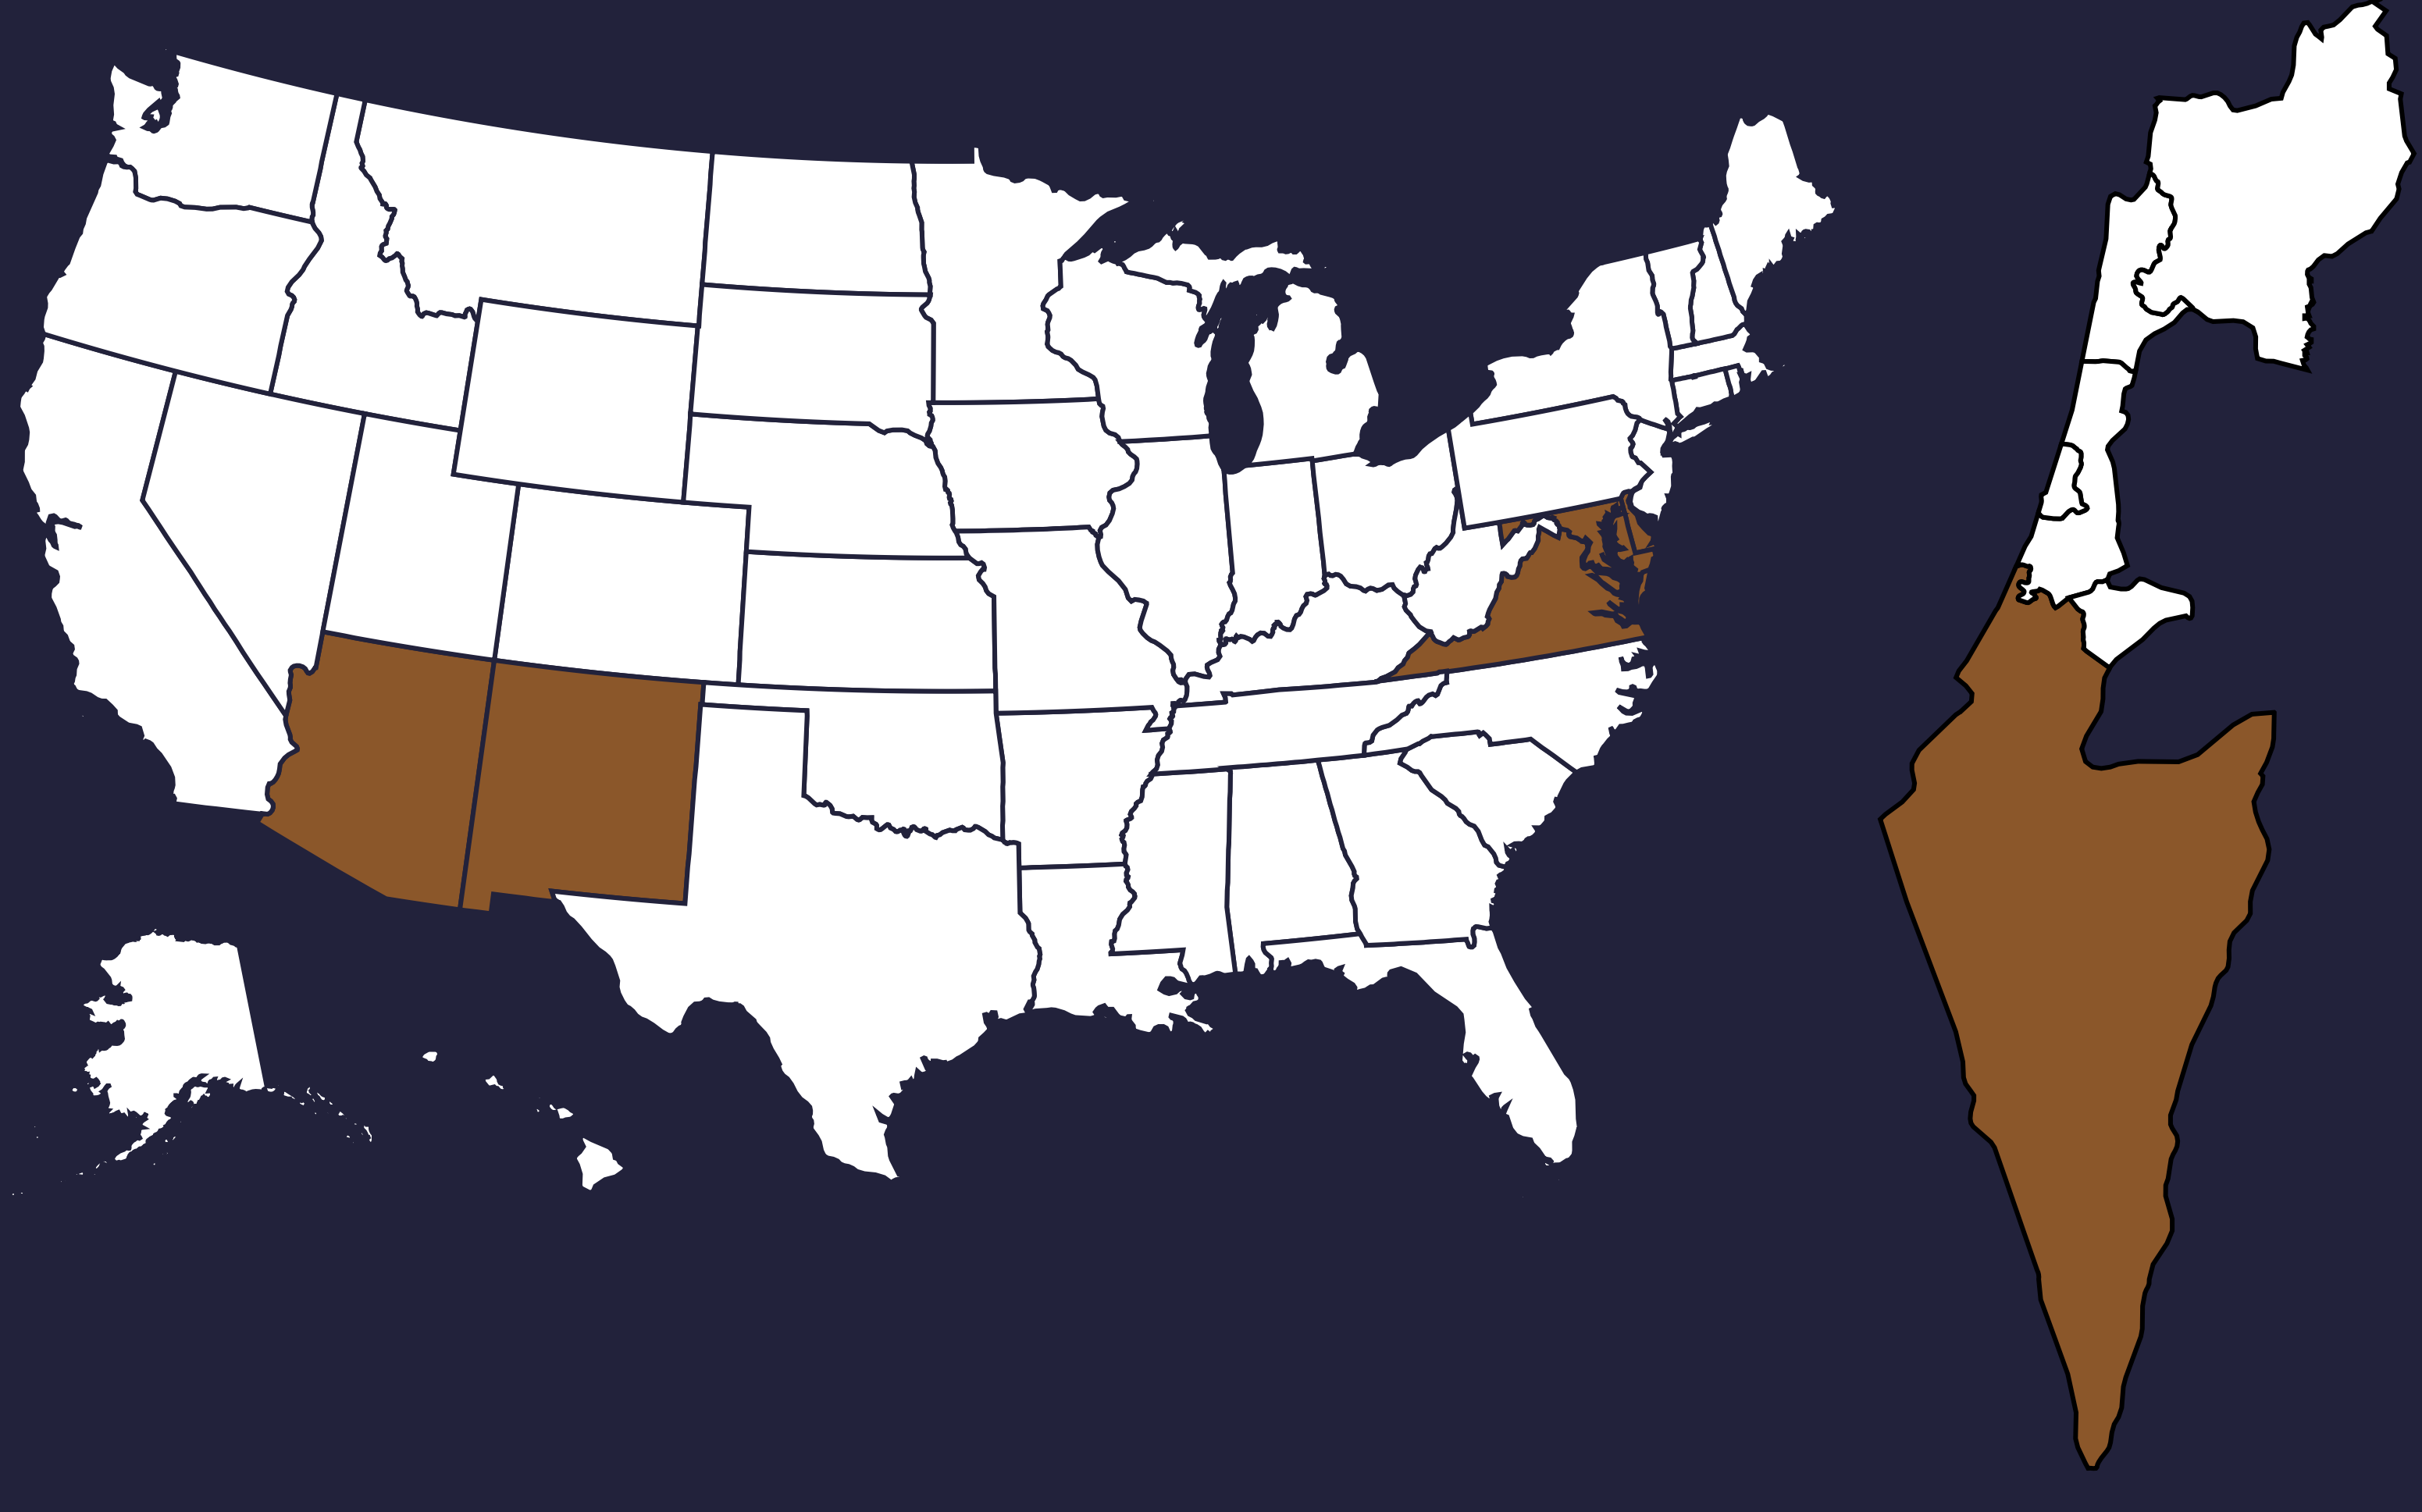

Upgrades

Upgrade and improve our current systems so our water use may be more sustainable for people and agriculture.

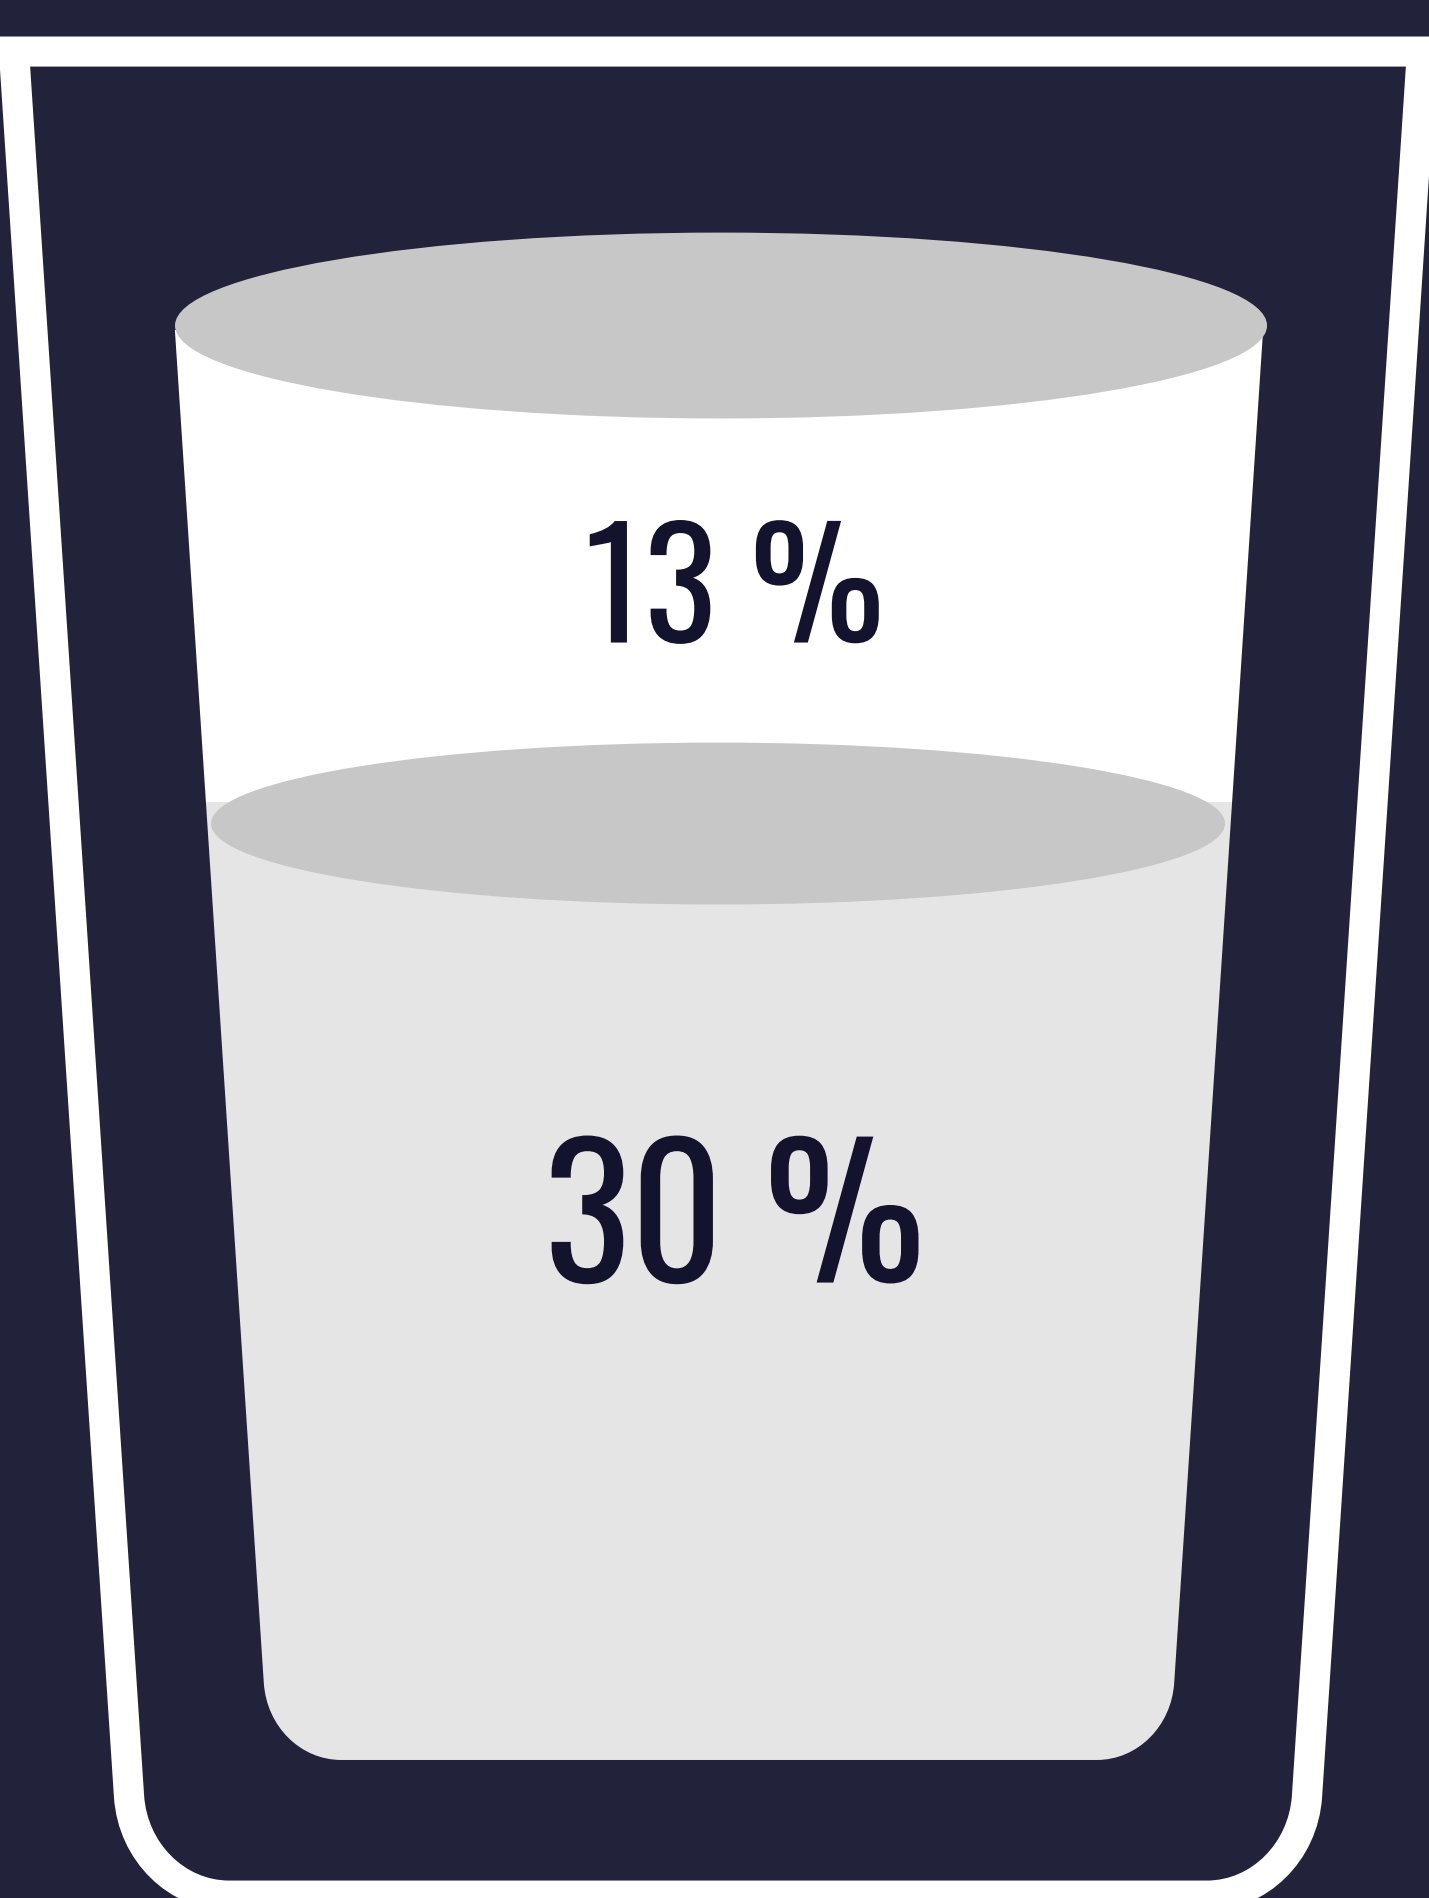

Global Partnerships

Reduce, Reuse, Recycle

Israel-Desalination

Learning from International Partnerships

In 2014

Water desalination systems helped provide 13% of Israel's water supply

By 2020

Israel's desalination systems will provide over 30% of their water supply
