

SAMPLE LANDSCAPE VISION STATEMENT

The BEST PLACE TO LIVE COMMUNITY landscaping plan complements the community's quiet and low-maintenance lifestyle with beautiful surroundings and strong land stewardship. Common areas are maintained using the most current ecologically sound and sustainable practices. Cost effectiveness comes from frequent monitoring of open space conditions, taking action when issues are small and manageable, and implementing solutions to achieve long term goals over a reasonable period of time. Open spaces are adequate for recreational use and enjoyment and are healthy for people, pets, and the environment as a whole. This is evidenced by a high percentage of tree canopy, consistently high water quality, water conservation efforts, and the biodiversity of insects, birds, and aquatic life.
